

Fishless Cycling Log

knowbetta.com

Betta fish care, backed by real research.

YOU'RE CYCLED WHEN

- ✓ A 2–3 ppm ammonia dose reads 0 ammonia within 24 hours
- ✓ Nitrite also reads 0
- ✓ Nitrate is present

All three? Do a big water change to bring nitrate down, then bring your betta home.

IF IT STALLS

- Keep the filter running 24/7; the bacteria need the oxygen.
- pH below 7.0? A small water change brings it back up.
- Past week eight? Check that your ammonia source hasn't run out.

Tank: _____ Size: _____ gal Ammonia source: _____

Day	Date	Ammonia (ppm)	Nitrite (ppm)	Nitrate (ppm)	pH	Dosed?	Notes
